

What Causes Day and Night?

Main Idea The pattern of day and night is caused by Earth's rotation.

Write answers to the questions on the lines below.

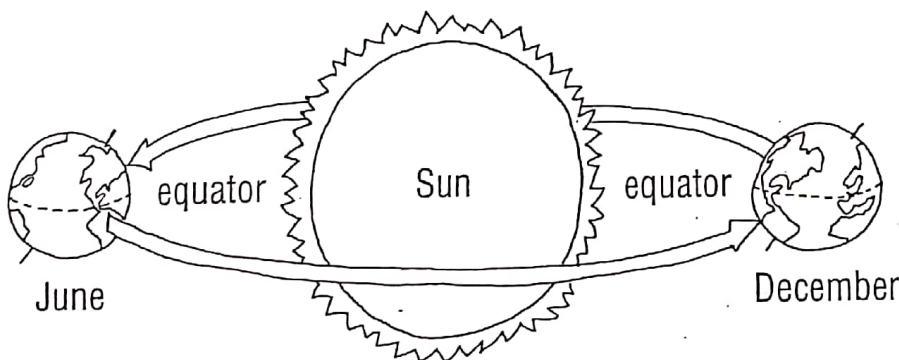

1. Describe how the Earth moves.

2. Describe planets' movements when they rotate.

3. What happens because of Earth's rotation?

4. Why does the length of day and night change throughout the year?

Use the diagram below to answer the question below.

5. Why are there fewer hours of daylight during the winter in places north of the Equator?
